

```
class Main implements Runnable
{
    public static void main(String[] args) {
        Main t1 =new Main();
        Thread t=new Thread(t1);
        t.start();
        System.out.println("This code is outside of the thread");
    }
    public void run()
    {
        System.out.println("This code is runnig in the thread");
    }
}
```
