

```
import java.util.Scanner;

public class ArithmeticExceptionEx
{
    public static void main(String[] args) {
        Scanner s = new Scanner(System.in);
        System.out.println("Enter Valur of n");
        int n = s.nextInt();
        try{
            int dividebyzero = 5/n;
            System.out.println("Rest of code in try bloack");

        }
        catch(ArithmeticException e){
            System.out.println("Arithmetic Exception =>" + e.getMessage());
        }
    }
}
```
