```java
class Main implements Runnable
{
        public static void main(String[] args) {
           Main t1 =new Main();
           Thread tc=new Thread(t1);
           tc.start();
            Main t2 =new Main();
           Thread ta=new Thread(t2);
           ta.start();
            Main t3 =new Main();
           Thread tb=new Thread(t3);
           tb.start();
                System.out.println("This code is outside of the thread");
        }
        public void run()
        {
           System.out.println("This code is runnig in the thread");
        }
}
```
