```java
public class Main extends Thread
{
    public static void main(String[]args)
    {
        Main thread=new Main();
        thread.start();
        System.out.println("This code is outside of the thread");}
    }
        public void run()
        {
            System.out.println("This code is running in a thread");
        }
}
```
